## This page is not Valid HTML 4.01 Transitional!

Below are the results of attempting to parse this document with an SGML parser.

- Error** *Line 83 column 85: there is no attribute "T-ARGET".*

```
...t.asp?prog_id=kajukenbokid1" t-arget="..._self">DOMAIN NAME</a> REGISTRATION</..
```

You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead).

This error may also result if the element itself is not supported in the document type you are using, as an undefined element will have no supported attributes; in this case, see the element-undefined error message for further information.

How to fix: check the spelling and case of the element and attribute, (Remember XHTML is all lower-case) and/or check that they are both allowed in the chosen document type, and/or use CSS instead of this attribute. If you received this error when using the <embed> element to incorporate flash media in a Web page, see the [FAQ item on valid flash](#).

- Error** *Line 148 column 195: value of attribute "ALIGN" cannot be "ABSMIDDLE"; must be one of "TOP", "MIDDLE", "BOTTOM", "LEFT", "RIGHT".*

```
...dth="10" height="11" align="absmiddle" ... border="0"></a></h5>
```

The value of the attribute is defined to be one of a list of possible values but in the document it contained something that is not allowed for that type of attribute. For instance, the "selected" attribute must be either minimized as "selected" or spelled out in full as "selected="selected"; a value like "selected="true" is not allowed.

3. **Error** *Line 148 column 207: required attribute "ALT" not specified.*

```
...ght="11" align="absmiddle" border="0" ></a></h5>
```

The attribute given above is required for an element that you've used, but you have omitted it. For instance, in most HTML and XHTML document types the "type" attribute is required on the "script" element and the "alt" attribute is required for the "img" element.

Typical values for `type` are `type="text/css"` for `<style>` and `type="text/javascript"` for `<script>`.

4. **Warning** *Line 169 column 47: reference to non-SGML character.*

```
<p>&copy; 1996 - 2006 KillerSites.com &#150; all rights reserved</p>
```

You've included a character reference to a character that is not defined in the document type you've chosen. This is most commonly caused by numerical references to characters from vendor proprietary character repertoires. Often the culprit will be fancy or typographical quote marks from either the Windows or Macintosh character repertoires.

The solution is to reference UNICODE characters instead. A list of common characters from the Windows character repertoire and their UNICODE equivalents can be found in the document "[On the use of some MS Windows characters in HTML](#)" maintained by [Jukka Korpela](mailto:jkorpela@cs.tut.fi).
